

Shortening Your Aluminum Sill Plate

To shorten your aluminum sill plate cut at the ends of the Chevrolet script where indicated in the drawing. determine the length needed to be cut off leaving 1/2" on each side to be telescoped together under the Chevrolet script. You may choose to cut only one side because if both sides were cut extra screw holes would be needed to hold the script down. Cutting on one side will create Chevrolet script to be offset a bit this is your choice.
